ARCH 521
Advanced Environment, Architecture & Global Health

ARCH 521 is the foundation graduate course in the Health and Well-being (HWB) program area. Design studios in HWB build on the knowledge and techniques the you learn in this course. Topics covered are at the intersection of environmental conditions and human health around the globe and we engage students in reading, discussing, and applying the results of the latest research and translational studies linking environmental design to health in a range of cultural contexts. You will learn to apply research to everyday practices and decision making, as well as to professional design, planning, and community health practices.

This four-credit course has three components:

1. **ONLINE:** At the start of each week, you will watch and listen to pre-recorded lectures from instructor-selected sources.

2. **WORKSHOP:** You will participate in a vertical active-learning workshop from 6:00-7:20pm on Wednesday with Professor Bollo.

3. **DISCUSSION:** You will choose a smaller, weekly discussion section with Professor Dearborn where you will explore the latest academic research and develop your final project, a secondary-source research study resulting in a 25-page scholarly paper.

**CRN Information**

71770 for the Online and Workshop components

Discussion Choices

71771 for 10 a.m. Wednesday
or
71772 for 12 p.m. Wednesday

*Note: This is a graduate-level course. Undergraduates enroll in ARCH 321.*
